How It Works

Yosi Health's Vaccine Management Platform is designed to improve both the patient and provider experience. Here's how this exclusive vaccination distribution platform helps everyone involved.

For Patients

1 Book Appointment

From your website, patients quickly and easily self-schedule appointments online or from their personal devices.

2 Complete Paperwork

Patients complete their vaccination forms from their personal devices (*via text or email*) prior to arrival.

3 Arrive

Patients arrive to their scheduled appointment with all required paperwork completed, dramatically reducing wait times and long lines.

4 Stay Informed

After their vaccination, patients receive specific follow-up information and instructions, as well as an automatic appointment reminder for their 2nd dose either 21 or 28 days later.

For Providers

1 Manage Appointment

Automatically set your vaccine locations and time slots so patients know when and where appointments are available.

2 Collect Vaccine Screenings

Automatically send Screening for Vaccine Contradictions via SMS or email. (*No app required!*)

3 Remind, Confirm & Cancel Appointments

Easily manage automatic appointment confirmations, reminders, and cancellations through a user-friendly dashboard.

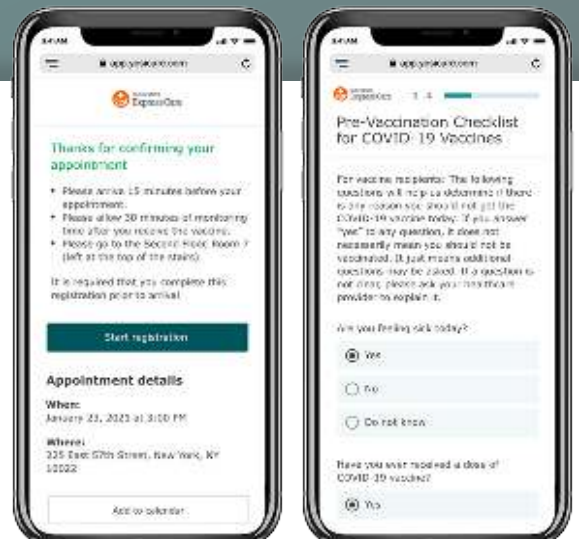

4 Share Critical Information

Automatically send follow-up information and instructions regarding their 1st vaccination dose. Set an automatic 2nd dose appointment reminder 21 or 28 days later.
